

AXA International House

REQUIREMENT:

Our objective was to design and construct a permanent modular ramp within a quick turnaround time and provide disabled users easy access to the courtyard.

The customer ruled out using a concrete ramp because it has a time-consuming installation process, which often results in days of disruption due to the necessary drying time. Moreover, concrete installations cannot be completed during rainy or snowy conditions.

CAD DRAWINGS:

During the site survey, a lidar scanner was used to photograph and digitally map the entire area, including the building, various ground levels, and any obstacles. This technology allows us to conduct site surveys swiftly, even under tight time constraints.

Once the data was collected, our in-house drawing team was able to generate a 3D representation of the ramp on top of an accurate depiction of the real location.

APPLICATION

Public Building

LOCATION

Tunbridge Wells, Kent

SYSTEM

Fully Compliant Ramp

SERVICE PACKAGE

Supply & Install

END RESULT:

Our installation team efficiently fitted a compliant ramp in under 24 hours. The system meets the requirements outlined in Part M and K of the Building Regulations.

FEATURES INCLUDED:

- Infill Handrail - This product safeguards against users climbing or falling through gaps.
- Yellow Tread - A safety feature designed to help those with impaired vision identify the system's nose and any level changes.
- Trombone Ends - Installed at the ends to prevent clothes from snagging.
- Mesh Platform – This is a multi-directional slip-resistant walkway with self-draining steel mesh with a galvanised finish.
- Continuous Handrail - This handrail system ensures that users always have a support to hold onto.
- Standard Colour: Black - Our ramps have a powder-coated black finish that is more durable than typical paint.
- Adjustable Telescopic Legs - These can be adapted to suit various threshold heights.
