

## Eling Wharf, Industrial Complex

### PROJECT BACKGROUND & REQUIREMENT:

While repairs were underway, the client urgently required a durable temporary solution to cover a flood-prone, uneven surface—one that could withstand frequent use, seasonal weather changes, and constant exposure to water.

Our galvanised steel walkway proved to be the perfect choice. With rust-resistant components and a self-draining mesh surface, it prevented puddles from forming, reduced slip risks, and provided exceptional durability in all weather conditions.

In contrast, a wooden ramp would have been unsuitable, as wood deteriorates quickly in wet conditions, becoming slippery and unsafe due to water pooling on its surface.

#### APPLICATION

Public Space

#### LOCATION

Southampton, Hampshire

#### SYSTEM

Temporary Walkway System

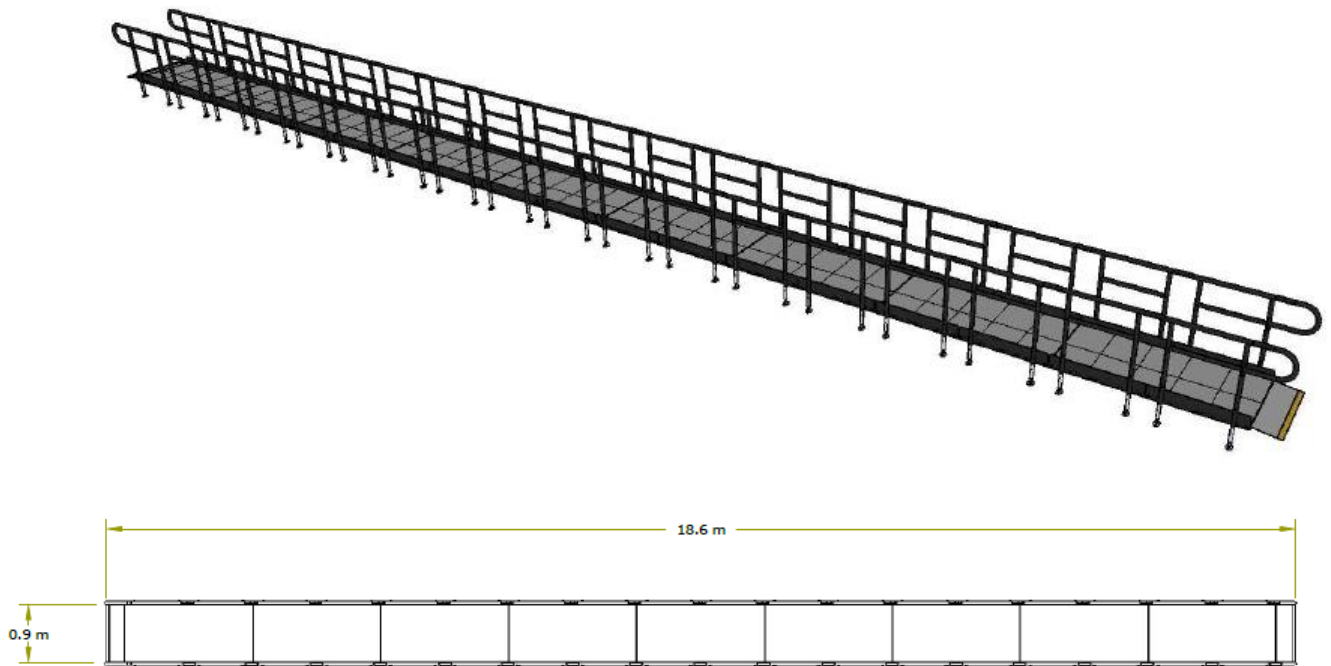

#### SERVICE PACKAGE

Hire

## DESIGN PHASE:

Our in-house design team produced a detailed 3D model and 2D plan of the project. These were included with customers quotation.

Platform

## INSTALLATION:

We installed a safe pedestrian walkway in under 24 hours, providing access without the need for costly groundwork.

Our in-house team oversaw every stage of the process - from design and fabrication to installation - ensuring everything ran smoothly from start to finish.

### FEATURES INCLUDED:

- Looped Trombone Ends & Prevents clothes from snagging at the ends.
- Slip-Resistant Mesh Platform - A multi-directional walkway with self-draining steel mesh.
- Standard Colour: Black - Powder-coated black finish for greater durability than traditional paint.
- Adjustable Telescopic Legs - Adaptable to various threshold heights.
- Anti-climbing Infill Handrail - Prevents users from climbing or falling through gaps.
- Slip-Resistant Yellow Tread - Enhances safety by making step edges and level changes more visible to those with impaired vision.
